

Dear FCC Commissioners,

I appreciate the great job you have done of managing the airwaves on behalf of the people of the United States of America. I write to you now to encourage you to continue in that tradition and protect the airwaves from the possibility of interference from the proposed Broadband Power Line (BPL) technology.

I am a certified, practicing electrical engineer who is concerned about the continued viability of radio communications. I have reviewed the results of the various tests of BPL to date and it is my considered opinion that BPL poses a serious threat to the continued operation of many vital radio communication services.

Therefore, I urge you to act responsibly, as you have done in the past, and prohibit the implementation of BPL technologies.

Robert Feldman, Electrical Engineer
